

CrowdSports

Tag and share your view of the football game.

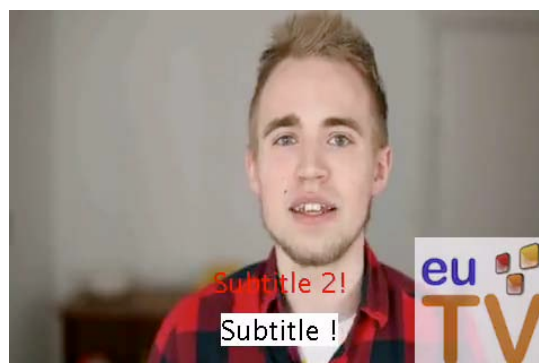

CrowdSports is using components of the euTV media monitoring and publishing framework to tag and share football games

Main features of CrowdSports:

- Takes XML-based annotations of football games as an input. Those can be produced for example with GoalShouter: <http://www.goalshouter.com>
- Synchronises XML annotations and visual information to match the relative time points of the annotations with the absolute time codes of the videos
- Creates visual summaries of how certain topics or events contained in videos of a collection have evolved over time, based on visual topic tracking
- Provides video composing facilities to add logos, captions and other content overlays

Do you hold football annotations and content and want to make it available on CrowdSports? **It is as simple as it can get: mail us at info@eutvweb.eu your XML/RSS feed and we will cater for the rest.**

Need an XML/RSS feed on your web site? **Mail info@eutvweb.eu and we'll help you set it up.**

Stay tuned and see more at <http://www.eutvweb.eu/>
